PROJECT 1 — RETAIL SALES & CUSTOMER PERFORMANCE ANALYSIS
Day 21 : Business Requirement Document

(30/09/2026)

1. Business Background

The business is a fashion retail company focused on selling a variety of fashion products across different categories and locations. The company maintains sales, customer, product, order, and location-related data.

Management wants to understand the overall business performance, including sales performance, profitability, customer behavior, product performance, category performance, and regional performance.

The purpose of this analysis is to provide management with a comprehensive view of the business and support data-driven decision-making.

2. Problem Statement

The company has historical sales and customer-related data; however, management needs a comprehensive analytical view of the business performance.

There is a need to analyze sales, revenue, profitability, customers, products, categories, orders, locations, and time-based performance to understand what is happening in the business and identify areas that require attention or improvement.

The analysis should provide meaningful business insights that can support management in making informed decisions regarding products, customers, sales, and regional performance.

3. Business Objectives

Objective 1 — Sales Performance

Analyze sales and revenue performance across different products, categories, locations, customer segments, and time periods.

Objective 2 — Profitability

Analyze profit and profit margins across products, categories, locations, customer segments, and time periods to understand their contribution to overall profitability.

Objective 3 — Customer Performance

Understand customer purchasing behavior, customer contribution to revenue and profit, customer type, age groups, gender, and customer segments.

Objective 4 — Product & Category Performance

Identify high-performing and underperforming products and categories based on sales, quantity sold, revenue, and profitability.

Objective 5 — Regional Performance

Compare sales, revenue, profit, customers, and orders across different cities, states, and regions.

Objective 6 — Order Performance

Analyze order volume, average order value, order channels, payment methods, and purchasing patterns.

Objective 7 — Time-Based Performance

Analyze sales and revenue trends across months, quarters, years, and days of the week to identify changes in business performance over time.

Objective 8 — Business Improvement Opportunities

Identify patterns, performance gaps, and potential opportunities that can help management improve sales, profitability, customer engagement, and regional performance.

4. Stakeholders

Stakeholder	Information Required
CEO / Management	Overall business performance, revenue, profit, growth, major trends and opportunities
Finance Manager	Revenue, profit, profit margin and financial performance
Sales Manager	Sales trends, orders, revenue, category performance and regional performance
Product Manager	Product and category sales, quantity sold and profitability
Marketing Manager	Customer behavior, customer segments, demographics and customer contribution

Stakeholder	Information Required
Regional Manager	City, state and region-wise sales, profit, customers and orders

5. Business Questions

Sales & Revenue

1. What is the total revenue generated by the business?
2. How do sales and revenue change over time?
3. Which products and categories generate the highest sales?
4. Which cities, states, and regions generate the highest revenue?

Profitability

5. What is the total profit generated by the business?
6. What is the overall profit margin?
7. Which products and categories contribute the most to profit?
8. Which locations contribute the most to profit?

Customer Analysis

9. How many unique customers does the business have?
10. Which customers and customer segments contribute the most to revenue and profit?
11. What is the proportion of repeat customers?
12. How does customer contribution vary across gender and age groups?

Product & Order Analysis

13. Which products are underperforming in sales and profitability?
14. What is the Average Order Value and how does it vary across categories and locations?
15. How do order performance and customer purchasing patterns vary across order channels and payment methods?

6. Key Performance Indicators (KPIs)

The main dashboard should contain headline KPIs that provide a quick overview of business performance.

1. Total Revenue

Measures the total revenue generated by the business.

Formula:

Total Revenue = Sum of Sales Revenue

2. Total Profit

Measures the total profit generated by the business.

Formula:

Total Profit = Sum of Profit

3. Total Orders

Measures the total number of orders generated.

4. Total Customers

Measures the number of unique customers.

5. Average Order Value (AOV)

Measures the average revenue generated per order.

Formula:

AOV = Total Revenue / Total Orders

6. Profit Margin %

Measures the percentage of revenue retained as profit.

Formula:

Profit Margin % = (Total Profit / Total Revenue) × 100

7. Revenue Growth %

Measures the percentage change in revenue compared with the previous period.

Formula:

Revenue Growth % = ((Current Revenue - Previous Revenue) / Previous Revenue) × 100

8. Total Units Sold

Measures the total quantity of products sold.

9. Average Selling Price

Measures the average revenue generated per unit sold.

Formula:

Average Selling Price = Total Revenue / Total Units Sold

10. Repeat Customer %

Measures the proportion of customers who have placed more than one order.

11. Customer Revenue Contribution

Measures the contribution of different customers or customer segments to total revenue.

12. Customer Profit Contribution

Measures the contribution of different customers or customer segments to total profit.

7. Expected Outcome

After completing the analysis, management should be able to:

1. Obtain a clear understanding of overall sales, revenue, orders, customers, and profitability.
2. Identify high-performing and underperforming products and categories.
3. Understand which customers and customer segments contribute significantly to revenue and profit.
4. Compare business performance across cities, states, and regions.
5. Understand purchasing patterns across customer demographics and customer types.
6. Identify changes and trends in revenue, sales, orders, and profitability over time.
7. Understand the relationship between order characteristics, customer behavior, products, and business performance.
8. Identify areas requiring further attention based on sales, profitability, customer, product, and regional performance.
9. Identify potential opportunities for improving revenue, profitability, customer engagement, and business performance.
10. Provide management with a structured, data-driven view of the business that can support informed business planning and decision-making.
